The brand new Saturn 34 Series is designed to carry both voice and facsimile over the IP network. It uses the industry standard SIP call control protocol so as to be compatible with free registration services or VoIP service providers' systems. As a standard user agent, it is compatible with all common Soft Switches and SIP proxy servers. While running optional server software, the Saturn 34 Series can be configured to establish a private VoIP network over the Internet without a third-party SIP Proxy Server.

The Saturn 34 Series VoIP Gateway empowers service providers delivering carrier-class IP Centrex service over a Total-IP NGN / 3GPP IMS infrastructure in a more secured way.

The Saturn gateway provides a connection platform between traditional POTS lines and the Internet. Over various broadband technologies including xDSL, HFC, wireless and fiber, the Saturn 34 Series carries toll quality voice, fax and data traffic simultaneously in a cost effective way.
