The brand new Saturn 34 Series analog VoIP gateways are feature-rich and cost-effective products designed for telecom operators to provide telephony services with security-enhanced capabilities in the modern complex networks.

The Saturn 34 Series VoIP Gateway empowers service providers delivering carrier-class IP Centrex service over a Total-IP NGN / 3GPP IMS infrastructure in a more secured way. With SRTP (Secured Real-Time Protocol) and TLS features, the voice transmission is secured with better protection against the interferences on the Internet.

The Saturn gateway provides a connection platform between traditional POTS lines and the Internet. Over various broadband technologies including xDSL, HFC, wireless and fiber, the Saturn 34 Series carries toll quality voice, fax and data traffic simultaneously in a cost effective way. In addition, the Saturn 34 Series supports intelligent features like long loop, line testing, polarity reversal, caller ID, call transfer, call waiting and 3-way calling. The ideal applications include MTU/MDU, virtual PBX, IP Centrex, PBX extension and hosted telephony services.
